PROFESSIONAL SUMMARY

Software engineer with M.S. in Computer Engineering and 11+ years of combined professional experience in production systems engineering and applied AI evaluation. After relocating from California to India in 2022, pivoted into applied AI through confidential freelance evaluation work with Scale AI and Outlier, reviewing AI-generated technical responses across multiple confidential project engagements across Python, C++, JavaScript, and reasoning-oriented tasks. Combines deep programming judgment with the reliability discipline developed debugging hardware-coupled automation systems for Fortune 500 enterprise clients at Jetec Corporation. Strong foundation in evaluation frameworks, quality rubrics, and model behavior analysis.

CORE COMPETENCIES

AI Evaluation & Quality Assurance

- LLM response quality review and structured feedback generation
- Code evaluation against correctness, efficiency, and security criteria
- Reasoning defect identification and failure mode analysis
- Evaluation framework design and rubric development
- LLM-as-a-Judge implementation and automated quality gates
- Red teaming protocols and adversarial testing concepts

Technical Foundation

- Python, C++, C#, SQL, Git — production-grade programming
- Debugging discipline for complex systems (40K+ LOC experience)
- Industrial automation, motion control, OCR workflow concepts
- RAG pipeline architecture and citation validation patterns

Professional Practice

- Confidential data handling and NDA compliance
- Technical documentation and test planning
- Regression detection and failure analysis
- Stakeholder communication across technical/non-technical audiences

RELEVANT EXPERIENCE

AI Engineer — Freelance Contract (Confidential AI Evaluation) | Scale AI | Remote

April 2024 – Present

- Evaluated AI-generated code and technical responses spanning Python, C++, JavaScript, and multi-domain reasoning challenges through ongoing confidential project engagements
- Assessed AI-generated code and technical responses against structured rubrics measuring correctness, logical consistency, and instruction alignment
- Identified subtle reasoning defects, incomplete implementations, and quality gaps across diverse programming domains including algorithms, system design, and debugging scenarios
- Maintained strict confidentiality regarding protected tasks, model behavior, and customer information

AI Researcher / Coding Evaluator — Freelance Contract | Outlier | Remote

November 2023 – March 2024

- Reviewed AI-generated technical responses and code outputs over a 5-month engagement, applying structured quality criteria and providing actionable written feedback
- Identified reasoning, accuracy, and implementation defects with detailed written feedback supporting model improvement cycles
- Maintained consistent evaluation standards while working independently in a confidential, task-driven remote environment

Software Control Engineer | Jetec Corporation, California, USA

January 2017 – February 2022

- Directly engineered controls software for the High-Performance Multi-Axis Motion Planning & Vision System (ISO-9001 compliant), integrating proprietary software with custom hardware drivers to reduce hardware dependency by 25% and interface latency by 15%
- Maintained and modernized a ~40K-LOC C++/C# production codebase for Fortune 500 manufacturing, automation, and enterprise clients, adapting controls software for strict data security and parts-traceability compliance
- Obtained specialized facility-access and data-handling clearances from Fortune 500 enterprise clients to perform on-site software integration, debugging, and systems commissioning under strict security protocols despite H1B visa status
- Built and scaled 15+ software modules integrating multi-axis motion controllers, automated optical inspection (AOI) vision hardware, and high-speed telemetry arrays across RS-232/485 serial and Ethernet (TCP/IP) protocols
- Created diagnostics and calibration utilities used by 10+ field technicians, resulting in zero critical systems failures across multi-year operations

PROJECTS

Deployed LLM-as-a-Judge Evaluation Harness | Python / GitHub Actions

github.com/SGajjar24/llm-eval-harness

- Engineered an automated model quality evaluation and red-teaming harness, integrated directly as a step in the CI/CD pipeline
- Designed custom evaluation metrics (Groundedness, Faithfulness, Instruction Adherence) using structured LLM outputs
- Implemented automatic drift detection and regression testing for LLM prompts, with continuous automated evaluation integrated into structured dashboard telemetry

Courtroom AI Citation Engine | Python

github.com/SGajjar24/courtroom-ai-citation-engine

- Built a citation-format validation tool for flagging AI-generated text without structured source references
- Designed strict and warning modes to explore output-validation controls for document-oriented AI workflows

Production-Grade Grounded RAG Pipeline | Python / FastAPI / Docker

github.com/SGajjar24/production-rag-pipeline

- Developed a containerized RAG pipeline with hybrid search (dense/sparse vectors) and cross-encoder re-ranking, measurably improving document retrieval precision through hybrid dense/sparse vector search
- Integrated structured citation verification and semantic alignment modules achieving significant reduction in hallucination rate through structured citation verification

EARLIER EXPERIENCE

Software Engineer Intern | Jetec Corporation, California, USA | July 2016 – December 2016

Network Engineer & Software Trainee | HCL Infosystems & Tops Technologies, India | June 2013 – July 2014

- Designed and built a Web-Based Claim Processing System using ASP.NET C#, .NET Framework 4.0, and SQL Server 2008 for employee online claim submissions and department tracking

EDUCATION & CERTIFICATIONS

Master of Science, Computer Engineering | California State University, Fullerton | 2016

Bachelor of Engineering, Computer Engineering | Gujarat Technological University | 2013

Microsoft Certified: Fabric Analytics Engineer Associate (Issued Jun 2024 · Credential ID: 25357166484B3609)

Microsoft Certified: Azure AI Fundamentals (AI-900 · Issued Sep 2023 · Credential ID: DE3DC5A266DD30C1)

AWS Certified Specialty: AWS Machine Learning Specialty (Issued Dec 2022)

AWS IoT & Edge Analytics: IoT Telemetry, Anomaly Detection, Greengrass, Fleet Indexing (Issued Dec 2022)

Additional: VHDL Design for ASIC & FPGA (Udemy), Selenium WebDriver Training (Udemy), Basics of Software Testing (Udemy)

KEY DIFFERENTIATORS

- Dual credibility: Production systems engineering discipline + hands-on AI evaluation experience
- Confidential work integrity: Demonstrated ability to handle sensitive tasks with professionalism
- Code quality mindset: 5+ years debugging hardware-coupled production systems translates directly to evaluation rigor
- Multi-language breadth: Evaluated outputs across Python, C++, JavaScript — strong generalist programmer
- Zero field failures: Track record of quality-first engineering at Jetec translates to evaluation thoroughness
